# System Integrity Statement

## INTEGRITY STATEMENT

Compuware Corporation is committed to conform to the IBM z/OS® System Integrity Statement as defined on the IBM website: [http://www-03.ibm.com/systems/z/solutions/security\\_integrity.html](http://www-03.ibm.com/systems/z/solutions/security_integrity.html). We back up this statement with extensive research, planning, coding and testing and thus publish this statement as confidence in the quality and integrity of our solutions.

Our commitment to this integrity statement starts with the first release of each of our solutions and continues with each subsequent release. Compuware solutions are coded with the intent to prevent any users from gaining access, circumventing, disabling, altering or obtaining control of key z/OS® system processes and resources unless allowed by the installation. Compuware develops, implements and continues to produce solutions that provide value to our customers and meet and exceed our customer requirements. We firmly believe in the quality of our solutions and stand by our commitment to the z/OS® System Integrity Statement.

## SYSTEM INTEGRITY MECHANISMS

Currently supported Compuware solutions do not introduce any known exposures within the z/OS® operating systems when installed and configured as described in our product documentation for currently supported z/OS® releases. Our solutions are developed in compliance with the IBM requirements as stated in the IBM z/OS® System Integrity Statement with the objective of preventing any program not authorized by a mechanism under the installation's control to:

- Circumvent or disable store or fetch protection
- Access a resource protected by a Security Server/Manager
- Obtain control in an authorized state; that is, in supervisor state, with a protection key less than eight (8), or Authorized Program Facility (APF) authorized

If an integrity problem is reported, Compuware will take action to resolve said problem within the supported z/OS® operating system. Compuware reserves the right to provide resolution for our currently supported solutions and unaltered copies of our solutions only.

Compuware reserves the right to amend or modify the information at any time at its sole discretion. The information is provided "as is" without warranty of any kind.
